

Jandel Engineering Limited

Jandel PN Typing Unit

Jandel Engineering Limited offers the PN Typing unit to determine the conductivity type of higher resistivity samples. The PN Unit is an optional extra for the various Jandel four point probe measurement systems. The same plug which is used for the Jandel Test Unit can be plugged into the PN unit. The sample is tested using the rectification method.

There are 3 possible measurement results indicated via LED lights:

1. P-type
2. N-type
3. No Contact / Unknown

If you require any further information on the Jandel PN Typing Unit please do not hesitate to contact us at Jandel using the details below
